

Ash and Oath Asset Guide

Image checklist and delivery instructions

Prepared for Doug Revell. Collect or create images using the filenames in the companion CSV, then place them in the project image inbox. This guide covers current game content and a proposed expansion library. It does not add new gameplay or automatically display uploaded files.

Your delivery folder

LoLaL-2.0 / asset-inbox /

Full location: C:/Users/dougr/OneDrive/Documents/ChatGPT/LoLaL-2.0/asset-inbox

The folder structure is created for you. Keep source art here. The existing public/art folder remains the optimized production library; do not replace it wholesale.

What to make first

Batch	Scope	Checklist rows
P1	5 army kits, 12 current character items, 6 chest states	23
P2	Current world art, companions, runes and faction identity	58
P3	Proposed dungeons, enemy identities, expanded gear and armor sets	339
Optional	Companion full bodies, avatar library and outcome scenes	21

The CSV contains 441 individually named asset slots, including existing art to review. This is a planning library, not an instruction to produce everything now. Start with the 23 P1 images, then work in small themed batches.

How to track progress

Use ash-and-oath-asset-checklist.csv in Excel or another spreadsheet editor. Every row includes the exact source path, dimensions, background requirement, scope, art brief and existing file when available. Set status to Not started, In progress, Ready for review, Approved or Integrated. Record creator/source and usage rights.

Future dungeon names, enemy designs, armor sets and equipment families are proposals. Finalize their designs before spending time or money on the P3 batch.

Image standards

Asset type	Source size	Composition
Equipment and runes	1024 × 1024 PNG	Transparent background; centered object; 10–15% clear margin.
Companion and enemy portraits	1024 × 1024 PNG	Full background; face and defining features within central 70%.
World and dungeon scenes	1920 × 1080 PNG	Full background; important subjects inside central 60% for mobile crops.
Full body creatures	1536 × 1536 PNG	Transparent background; include all wings, feet, weapons and tails.
Faction banners	1024 × 1536 PNG	Transparent background; vertical banner, no text.

One visual language

Use painterly medieval fantasy with weathered iron, leather, timber and stone. Favor dark forest greens, muted earth tones and warm gold light. Magic should be restrained and readable. Keep camera angle, lighting direction and object scale consistent within each equipment family.

Do not bake in names, stats, rarity borders, buttons, watermarks or the game logo. The interface supplies those elements. Do not create a separate image for each random stat roll. A legendary named item can have unique art; ordinary rarity changes can use interface treatments.

File rules

Use lowercase filenames with hyphens. The CSV specifies PNG originals. If you already have a JPEG or WebP, keep its real extension and note the change in the CSV; renaming the extension does not convert the image. Keep editable masters outside the chosen-file path.

Use a variants/ subfolder for alternatives. Leave one approved image at the expected filename. Production integration will export optimized WebP files, typically 512 px item thumbnails and up to 1920 px scenes, while preserving these originals.

Reusable prompt structure

“[Asset subject], Ash and Oath medieval fantasy game art, [materials and distinctive motif], painterly realism, [consistent camera], warm directional light, readable silhouette, [transparent or full background], centered composition with safe margins, no text, no interface, no watermark.”

Check the small-size thumbnail before accepting any equipment image. A beautiful large illustration is not useful if the item becomes an indistinct shape in inventory.

Army and current character items

These 17 images correspond to equipment already present in the game. Their CSV paths are ready to use. Current character armor is one slot; the expanded slot system described later is not implemented yet.

Folder under asset inbox	Item filenames ending in png
army/	militia-blades, sentinel-spears, ranger-longbows, royal-halberds, padded-armor
character/current/weapons/	travelers-blade, iron-longsword, wardens-edge, moonsteel-saber, oathkeeper, dawnbringer
character/current/armor/	weathered-leathers, scouts-jerkin, briarhide-coat, sentinels-plate, mantle-of-the-fallen, aegis-of-the-first-king

Equipment direction

Family	Visual distinction
Army kits	Practical, uniform and mass produced. Spears, bows and halberds must have distinct silhouettes.
Starting character gear	Traveler's Blade and Weathered Leathers look used and repairable.
Higher character gear	Improve materials and craftsmanship gradually. Reserve elaborate detailing for named high-rarity items.
Armor	Show the actual wearable armor, not an entire character obscuring it. Keep a consistent front or three-quarter angle.

Optional role portraits in the second batch

army/unarmed-recruit.png
army/offensive-soldier.png
army/defensive-soldier.png

These are presentation assets for existing roles, not new unit classes. Offense and defense should remain understandable through labels even without the image.

Chests companions and discoveries

Folder	Images to provide
chests/	wayfarer-chest-closed.png and wayfarer-chest-open.png; repeat for warlord and sovereign.
runes/	rune-of-resolve.png, rune-of-vigor.png, rune-of-ascendancy.png, rune-of-the-ancients.png, rune-of-eternity.png
companions/	woodland-fox-portrait.png, mossback-owl-portrait.png, silverfang-wolf-portrait.png, ember-drake-portrait.png, dawn-phoenix-portrait.png

Chest pairs

Create each open and closed pair from the same camera, object position and design. Wayfarer uses worn wood and iron; Warlord uses reinforced military fittings; Sovereign uses ancient royal craftsmanship. Keep the reward itself out of the open image so it can be revealed separately.

Companions already have artwork

Companion	Existing production image
Woodland Fox	public/art/companion-0.webp
Mossback Owl	public/art/companion-1.webp
Silverfang Wolf	public/art/companion-2.webp
Ember Drake	public/art/companion-3.webp
Dawn Phoenix	public/art/companion-4.webp

Existing portraits may be kept. Optional full-body files use the same slug with -full.png. Match the portrait's markings, proportions and colors. Injury, experience, ability and rarity indicators are interface overlays, not separate paintings.

Keep discoveries private

Rune images belong in the private working inbox until integrated with discovery rules. Their artwork should only appear in the player interface after the relevant discovery. This document is a production checklist, not a public loot guide.

Settlements buildings and factions

Create six settlement scenes from the same landscape and viewpoint. Players should recognize their original home inside each larger settlement.

Folder	Required filenames ending in png
settlements/	homestead, settlement, village, castle, stronghold, citadel
buildings/	armory, barracks, blacksmith, trading-post, watchtower, bank
factions/iron-covenant/	emblem, banner, commander
factions/verdant-pact/	emblem, banner, commander
factions/ashen-order/	emblem, banner, commander
factions/tidebound/	emblem, banner, commander

Existing settlement artwork

public/art/homestead.webp, village.webp and stronghold.webp already exist. The current app reuses these across multiple tiers. Keep them if they fit the six-scene progression; the CSV marks them for review rather than mandatory replacement.

Faction direction

Faction	Suggested identity
Iron Covenant	Disciplined ironwork, warm gold, sturdy heraldry.
Verdant Pact	Living roots, leaves, green cloth, practical woodland materials.
Ashen Order	Charcoal, muted red, ancient sigils, restrained ember light.
Tidebound	Sea blue, silver, waves, ropes and maritime craftsmanship.

Faction symbols should work at small sizes. Clean vector emblems can be supplied as SVG in addition to the PNG source. Avoid intricate marks that disappear in a small badge.

Do not generate an image for every barracks or bank level. A few major upgrade appearances can be added later after the base artwork is established.

Current dungeon art checklist

Each dungeon uses a stable folder under asset-inbox/dungeons/. Existing entrance and boss illustrations may be reused. Stage backgrounds and separate arenas are additions; their presence in the inbox does not create a new game encounter.

Dungeon folder	Stage 01 through stage 04	Boss
whispering-woods/	Forgotten Path; Briar Hollow; Sunken Shrine; Watcher's Crossing	Thornbound Guardian
hollowcrypt/	Silent Stair; Hall of Echoes; Bone Archive; Kingless Court	Oathless King
ember-citadel/	Cinder Gate; Furnace of Names; Ashfall Bridge; Crimson Spire	Last Flame

The standard dungeon pack

Filename	Purpose
entrance.png	Dungeon selection and arrival scene.
stage-01.png to stage-04.png	Four distinct non-boss stage environments.
boss-arena.png	Boss location without the boss, leaving space for overlays.
boss.png	Boss portrait; keep existing wide artwork until a portrait is needed.
enemy-charging.png	Proposed regular enemy with an aggressive moving silhouette.
enemy-channeling.png	Proposed caster or ritual enemy.
enemy-fortified.png	Proposed armored or entrenched enemy.

One standard pack contains 10 images. The three enemy identities still need design work, including in existing dungeons. Their filenames describe tactical roles, not finalized creature names.

Existing files to review

Whispering Woods: `dungeon.webp` and `thornbound-boss.webp`.
Hollowcrypt: `crypt.webp` and `oathless-boss.webp`.
Ember Citadel: `ember.webp` and `flame-boss.webp`.
All six live under `public/art/`.

Proposed twenty dungeon roadmap

Three dungeons already exist; the other 17 names below are working proposals. Regional grouping is also proposed: it does not replace current in-game region labels. Approve a region's lore, bosses and enemies before commissioning its images.

Region	Dungeon names	Content status
Borderlands	Whispering Woods; Bandit Redoubt; Briarfen Marsh; Watchers Quarry	First exists; three proposed
Fallen Kingdoms	Hollowcrypt; Ruins of Alderkeep; Mourning Cathedral; Siege of the Empty Throne	First exists; three proposed
Ashen Frontier	Ember Citadel; Cinderworks; Obsidian Crucible; Caldera of the First Fire	First exists; three proposed
Drowned Coast	Saltwind Wrecks; Drowned Basilica; Tempest Bastion; Abyssal Court	All proposed
Shattered Expanse	Glasswood Rift; Astral Archive; Broken Observatory; Oathbreakers End	All proposed

Scope and folder naming

The CSV expands all 20 dungeon packs into 200 individual filenames, including the three current dungeons. Folder names are lowercase hyphenated dungeon names, for example dungeons/drowned-basilica/boss-arena.png. Each future stage and boss is deliberately unnamed until its encounter is designed.

Produce one complete region at a time

First agree on the visual theme, one boss identity and three enemy identities per dungeon. Then produce the entrance and boss key art. Use those as references for stage locations, the arena and regular enemies. This avoids a collection of attractive images that do not belong to the same place.

Difficulty variants should generally reuse environments with interface effects or carefully chosen alternate lighting. Do not make a second full art pack simply because enemy stats are higher.

Expanded character equipment library

Proposed slots: main hand, off hand, helm, chest, gloves, greaves, boots and accessory. Two-handed weapons occupy both hands. These slot rules and new item families still require implementation; current character equipment remains weapon and armor plus runes and companion.

Group per tier	Base filenames	Count over five tiers
Weapons	sword, axe, mace, dagger, bow, staff	30
Off hand	shield, parrying-blade, focus	15
Armor	light, medium and heavy versions of helm, chest, gloves, greaves and boots	75
Accessories	ring, amulet, charm	15

This creates 135 proposed base designs. The CSV lists each separately. Tiers are t01 through t05; these are equipment progression tiers, not rarity or settlement levels.

Exact path examples

character/future/t01/weapons/sword.png

character/future/t03/offhand/shield.png

character/future/t05/armor/heavy-helm.png

character/future/t02/accessories/amulet.png

All paths are beneath asset-inbox/.

Keep the library manageable

A base item shares its image across ordinary stat rolls. Rarity borders, affix names and set indicators come from the interface. Create additional artwork only when an item has a distinctive visual identity, such as a named unique or a recognizable set piece.

Start with one representative equipment tier to agree on framing and materials before producing all five. Light armor should emphasize cloth and leather, medium armor reinforced layers, and heavy armor substantial metal protection.

Proposed armor sets and extra artwork

Five proposed sets each need five pieces: helm, chest, gloves, greaves and boots. That is 25 distinct set images, separate from the generic armor library. Two, three and five-piece bonuses are a design proposal; their effects and values are not finalized.

Set folder	Visual brief
thornwarden/	Bark textures, green cloth and thorn details; survival.
gravekeeper/	Ancient iron, faded funerary cloth and bone motifs; endurance.
emberwatch/	Blackened steel and restrained ember accents; offense.
pathfinder/	Supple leather, practical buckles and forest cloth; evasion.
oathmarshal/	Disciplined plate, gold trim and heraldic details; leadership.

Each folder sits under asset-inbox/character/sets/ and contains helm.png, chest.png, gloves.png, greaves.png, boots.png. Design the whole set together before isolating its pieces. Repeat materials and motifs so matching pieces are recognizable without relying only on their border color.

Optional character and outcome artwork

Folder	Scope
avatars/	commander-01.png through commander-12.png. A varied portrait library for future player and simulated-opponent presentation.
events/	victory-battlefield.png, defended-stronghold.png, plundered-treasury.png, season-champions.png. Reusable scenes without fixed player names or winners.

Assets that should remain interface elements

Keep AP, gold, shields, ability symbols, rank indicators, formation diagrams, rarity frames and progress bars as consistent vector/UI elements. Ferocity, Guardian and Scavenger need readable symbols, but not large generated illustrations. Chest glows and damage flashes can be effects layered over the artwork.

Companion evolutions, alternate skins, world maps, crafting material families and seasonal cosmetic rewards can become later batches. Their catalog is not yet specified, so no invented production filenames are required for them now.

Delivery and integration checklist

1 Choose a small batch

Start with P1 in the CSV. For a proposed batch, finalize item identities or dungeon encounters first.

2 Save each original

Use the `source_path` from the CSV relative to the project root. Preserve the true file extension. Do not put large originals into `public/art`.

3 Check the image

Verify dimensions, background transparency, safe margins, complete silhouettes and consistency with neighboring assets. Preview items at small size and scenes in a narrow mobile crop.

4 Update the checklist

Record creator/source, permission or license details, status and any filename change. Mark a chosen image Ready for review; keep alternates under variants/.

5 Hand off the batch

Tell me which batch is ready and where you saved it. You do not need to wait until all planned images exist.

6 Integrate and verify

We will optimize exports, map images to stable content IDs, add accessible descriptions and fallbacks, check desktop/mobile layouts, and publish through the normal deployment process.

Important limits

Adding images alone does not implement additional equipment slots, armor set bonuses, new dungeons or enemy mechanics. Existing content can receive artwork sooner; future content needs its gameplay implementation. File presence in `asset-inbox` does not automatically change the live app.

Retain your original image masters. Integration should produce separate optimized files so later resizing and cropping do not degrade the only copy. Only assets you have permission to use should be included in the production game.

Reference inventory: 441 rows in the accompanying CSV. Content checked against `src/game/data.ts`, `src/game/engine.ts`, `src/game/companions.ts` and `public/art` on 15 September 2026. Proposed rows are planning recommendations, not implemented features.
